

2026

TAKOMO

A makerspace for hardware development.

**Built and maintained by a
hardware consortium**

TAKOMO IS

Where ambitious
builders come to build
the physical future.

AS A COLLECTIVE

We are a hardware
consortium facilitating a
makerspace for its
members.

Thinkin' Rocks

Hardware & Compute

Aalto Space Association

Satellites & Rocketry

Aalto Robotics Club

Robotics & Automation

The world is shifting back to hardware

Software got easy. The value moved to the physical world. Capital and industry in Europe - and worldwide - are all rushing back to build it. Four forces, arriving at once.

Software is becoming abundant

- AI writes ~41% of all code - and 75% of new code at Google (NCSD 2026, TechSpot 2026)
- What can AI not do?

Capital is moving from models to machines

- Deep tech now takes a record ~32% of all European VC - roughly a third of Europe's venture money flowing into hardware, energy and industry (European Deep Tech Report 2025)
- Robotics and physical AI raised \$27.6B last year, across 1,000+ deals (PitchBook 2025)

The industrial base is being rebuilt

- AI is climbing out of the cloud and into the real world
- Industrial companies, the backbone of the Finnish economy, need to automate to stay competitive

Europe is re-industrializing

- Draghi's estimate: the EU needs ~€800B a year in new investment to stay competitive - energy, chips, industrial capacity (EC 2024)
- Already moving: a €100B Clean Industrial Deal, a Chips Act, a scramble for sovereignty in what it used to import (EC 2025)
- Finland aims to be at the head of that movement. A target that won't be achieved by hoping.

We have the talent. We are missing a shared home.

Engineer / Researcher

**Lacks equipment
for fast
prototyping**

Student

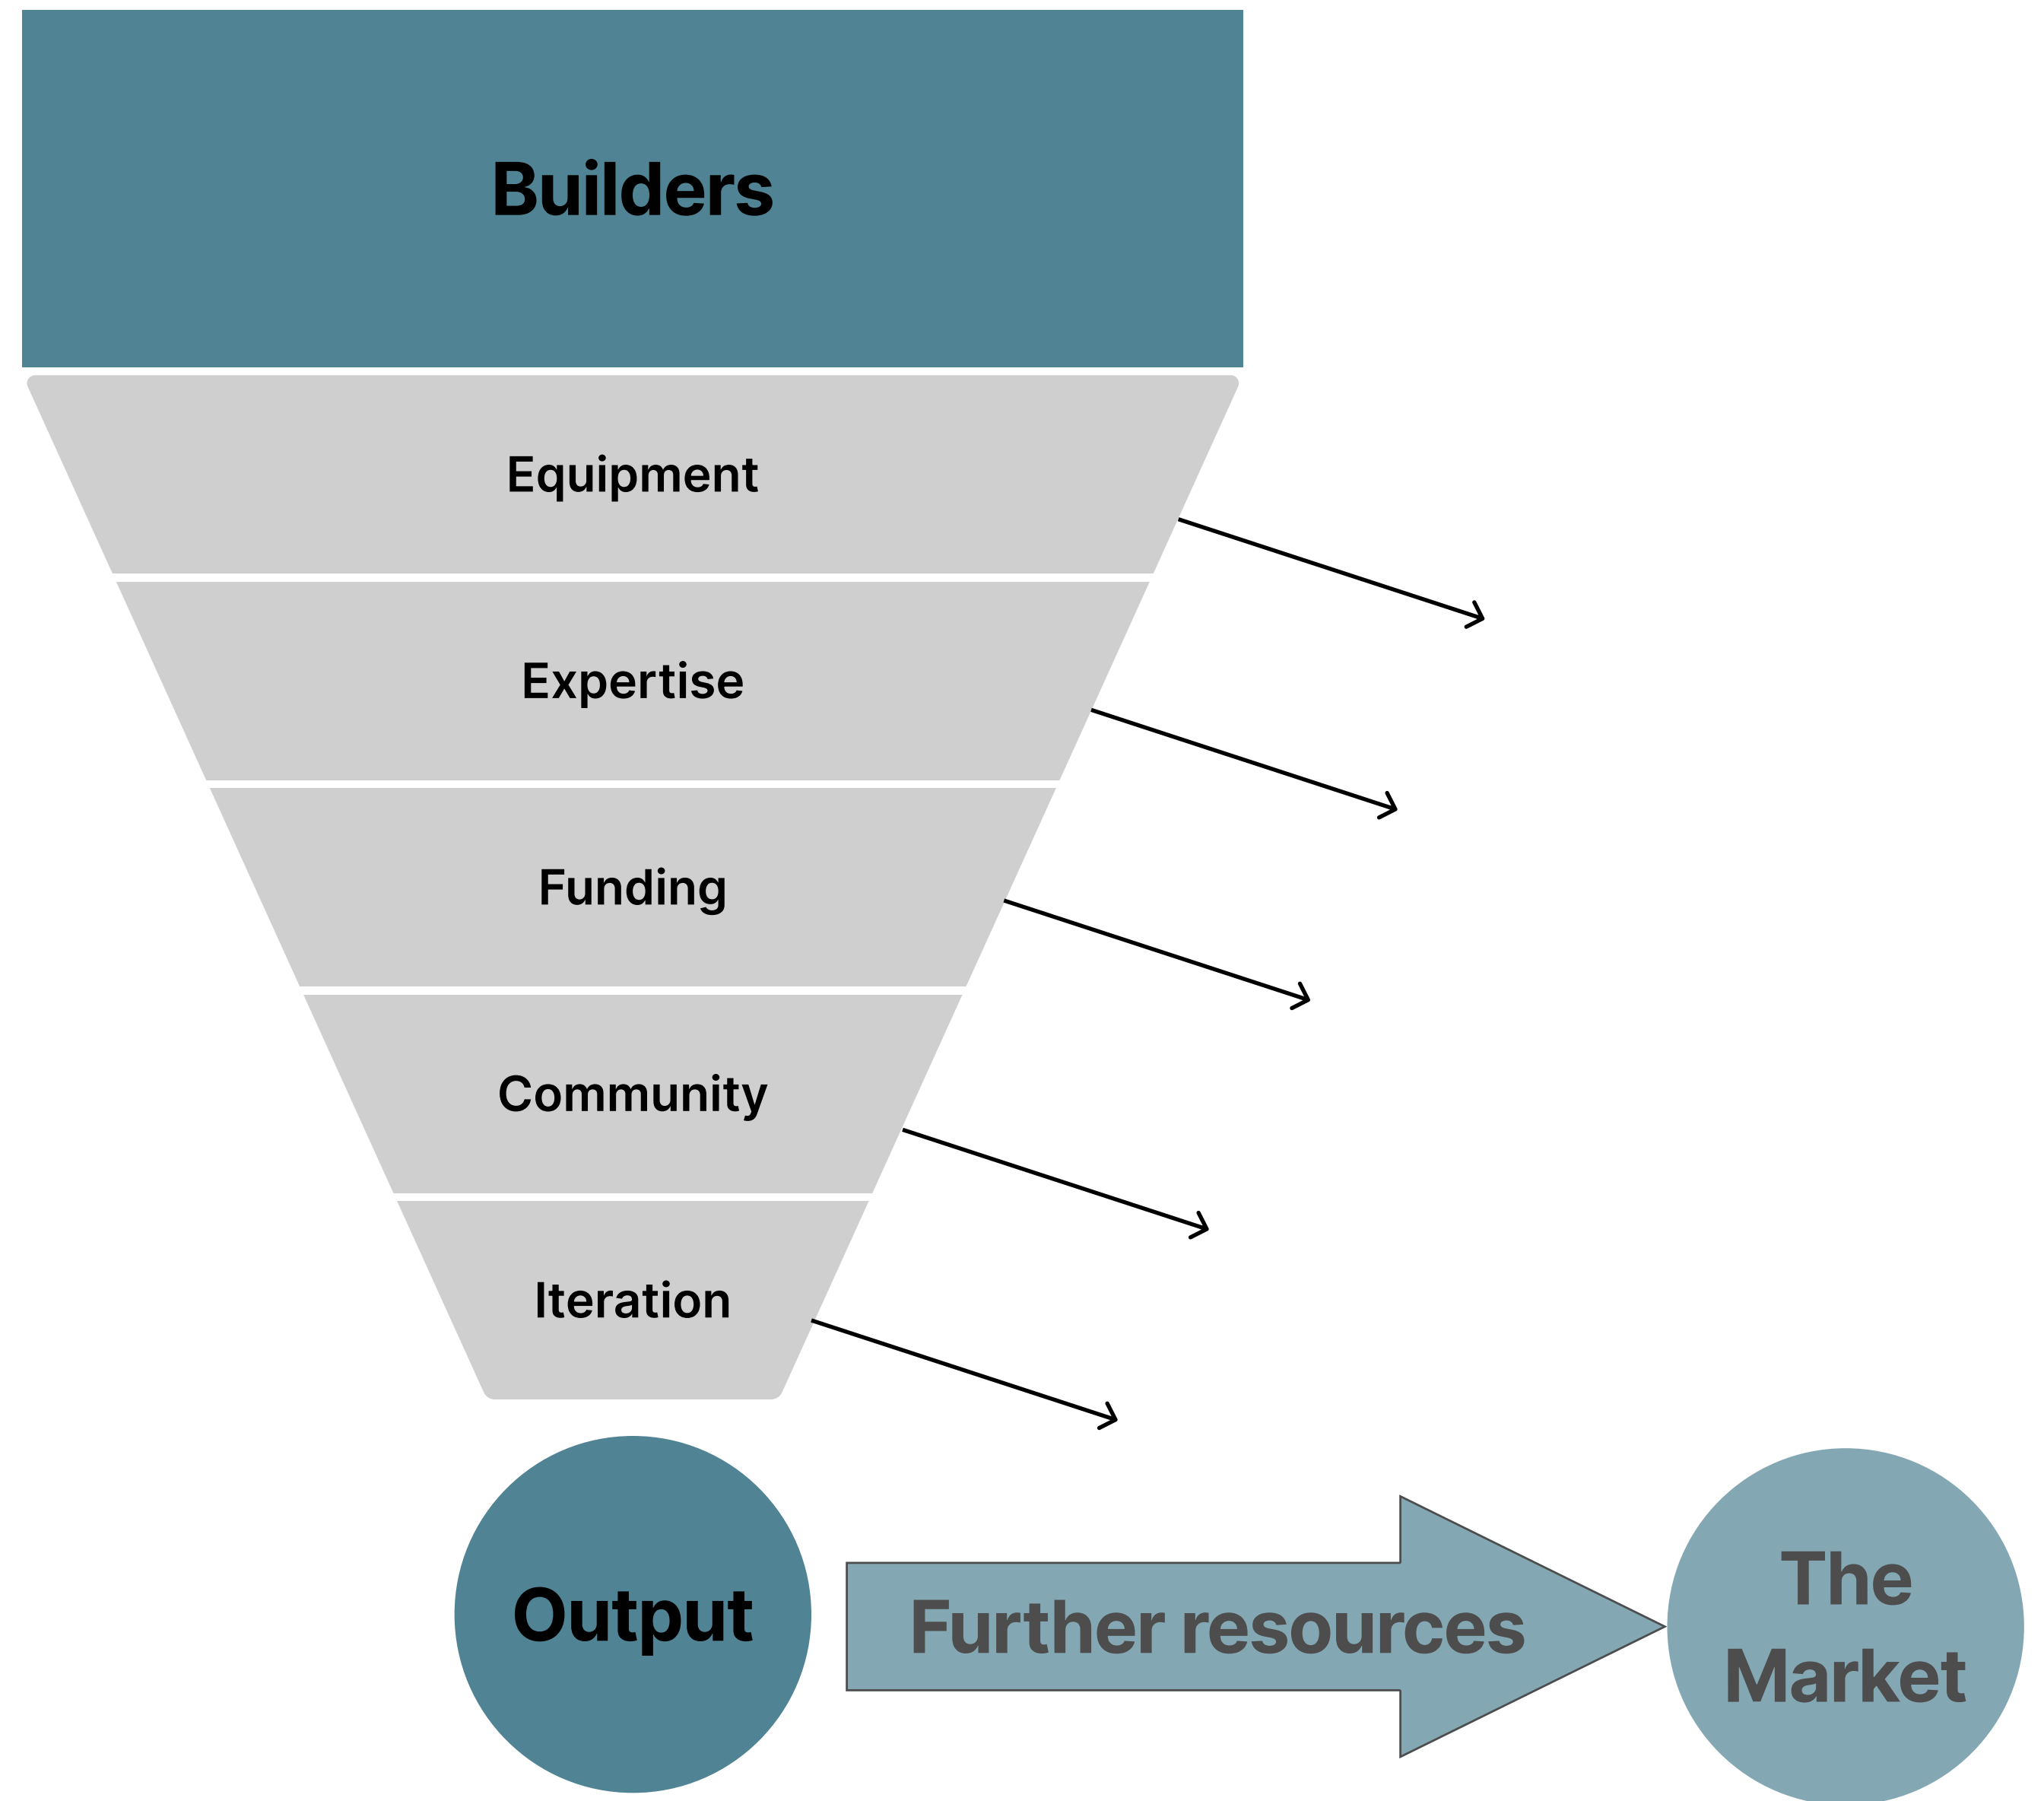

**Lacks funding,
community and
resources to
purchase
equipment**

Hobbyist

**Lacks community
to gain feedback
and ideas**

The problem is connecting builders to output

When early-stage resources stay
scattered, value leaks at every step → and
everyone loses.

Opportunity

- Finland and Aalto University have a robust history in R&D and design
- The nordics lack a space for builders to build freely and fast
- Strong industry ties and support exist
- The community is waiting for TAKOMO to exist

TAKOMO

Aalto Hardware Consortium

The forge for building hardware

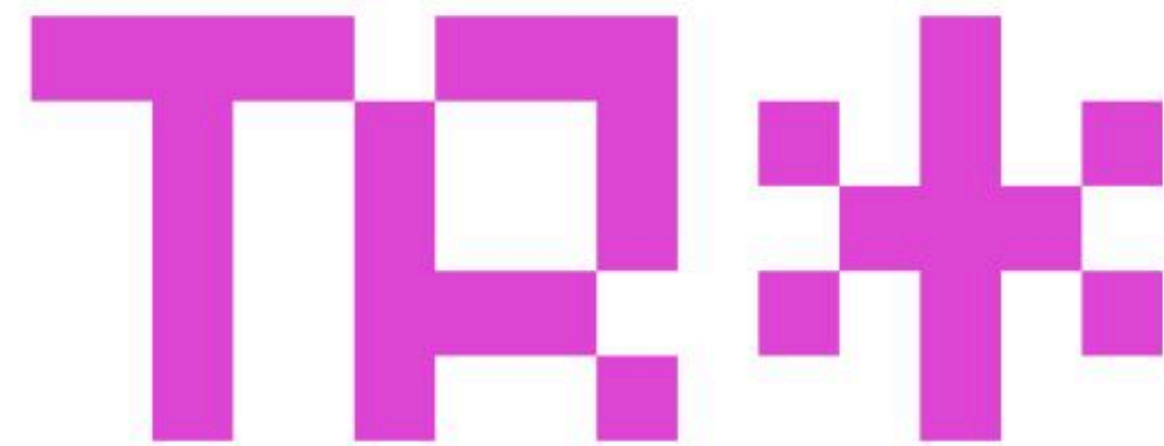

TAKOMO

The shared makerspace project
Three proven communities, one roof.

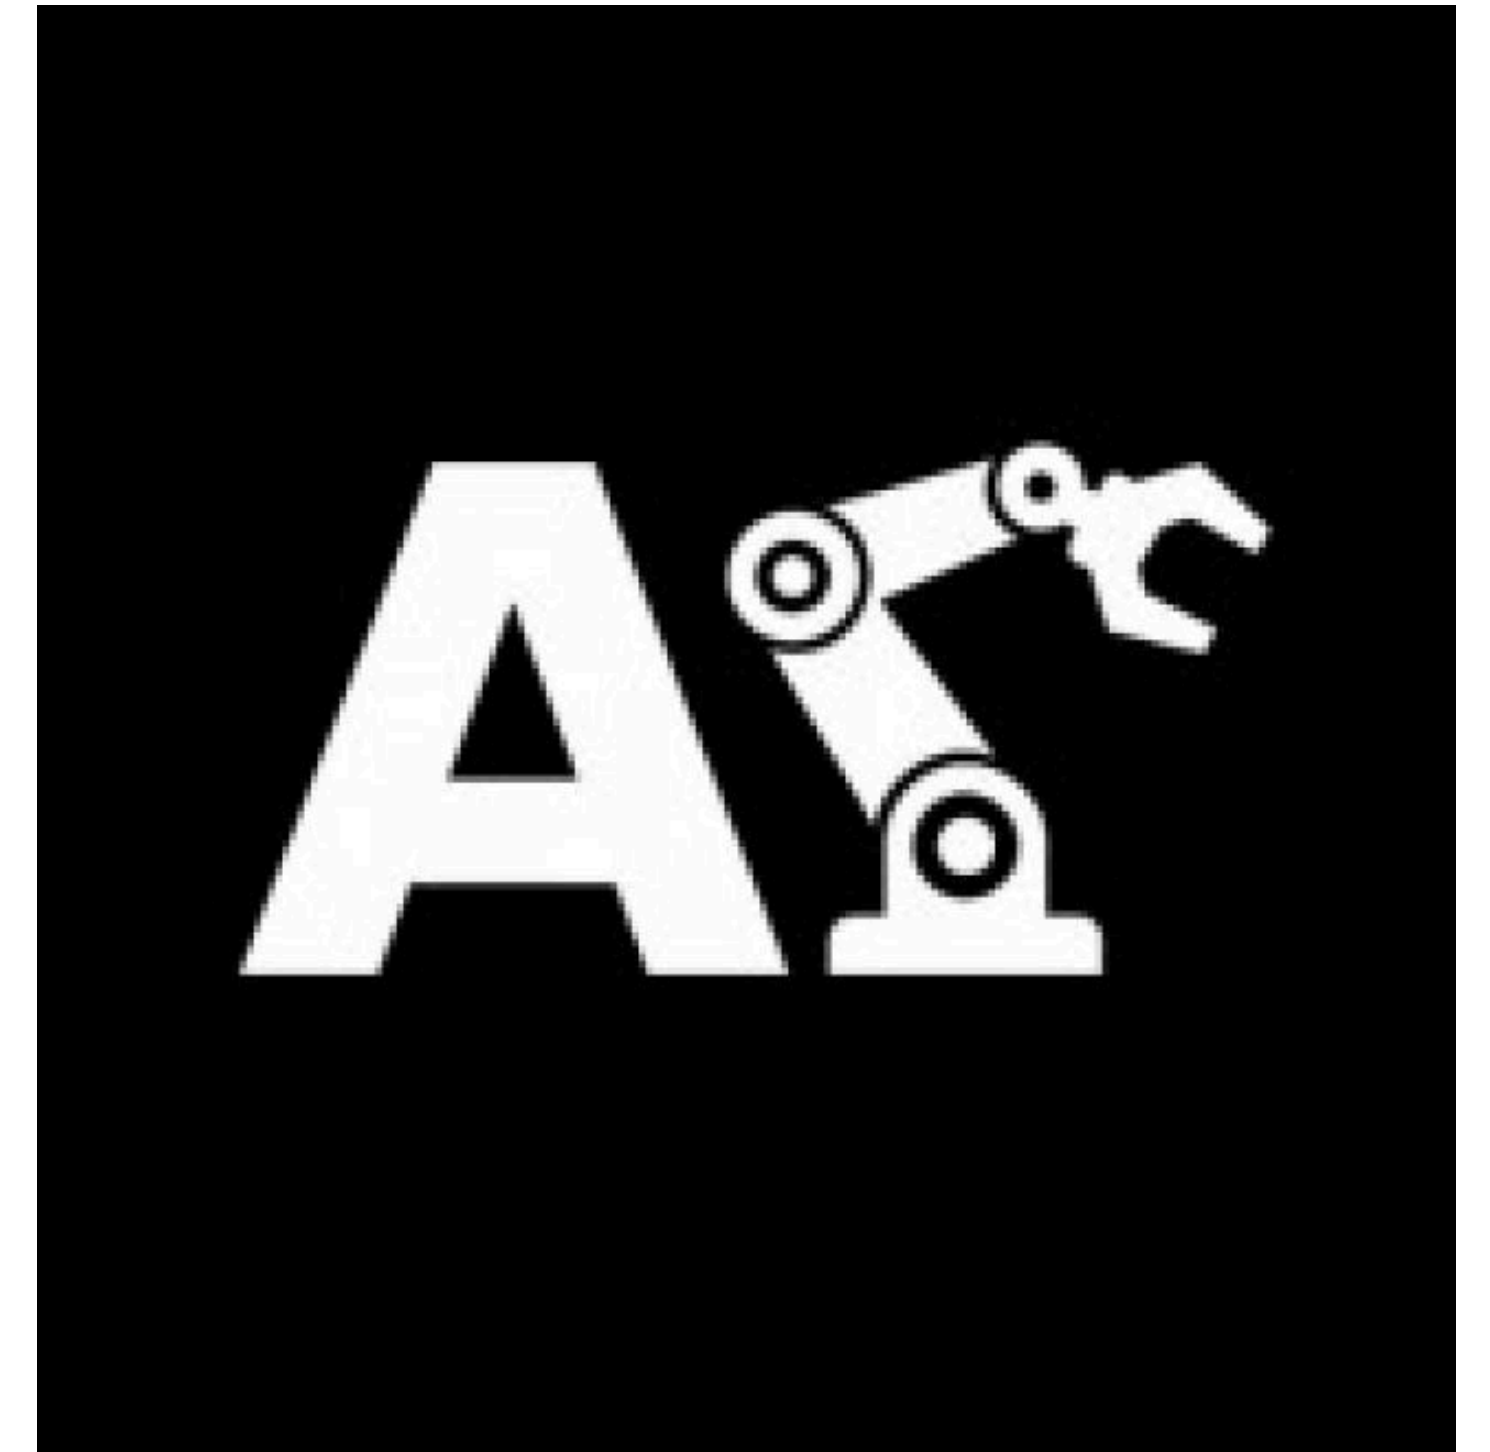

Aalto Space Association

An organisation with the goal of promoting interest, education, and cooperation in the satellite technology, rocketry, and astronomy among students at Aalto University

Thinkin' Rocks

An organization created to support builders, researchers, and entrepreneurs working on projects related to hardware and emerging computational systems, bringing them together into a community that promotes knowledge sharing and experimentation in the field.

Aalto Robotics Club

An organization that unites people around ambitious, real-world projects in robotics and gives them access to modern tools and resources. Members gain genuine experience with a current technical stack, mentored by industry specialists and active researchers.

250+

Events over the course
of the year

5 (+10)

International
collaborations

20+

Projects supported

As a collective

2000+

Event attendees

10+

Industry partners

**1000
(and growing)**

Community members

50+

systems in the
hardware library

10

Research collaborations

Morning

Researchers run a ROS workshop; a founder team creates components on one of the 3D-printers; the hardware library checks out a Jetson and an FPGA board.

Midday

An industry partner drops in with a real-world problem; two members spin up a project around it over lunch.

Afternoon

The satellite team runs a vibration test; a robotics squad iterates on rover; a solo builder debugs a board beside a PHD who's done it before.

Evening

A build session, a talk, a demo night - and someone decides to turn their prototype into a company.

What a day in the life would look like

1 Philosophical

A community where technology is something you can understand, modify, and create: the future is built, not waited for.

A third space for engineers to hangout, share ideas, and be around like-minded individuals.

2 Professional

Hands-on, cross-disciplinary experience that produces engineers who can prototype, collaborate, and turn ideas into working systems. A workforce ready for the future.

3 Financial

Prototypes become products, open-source projects become companies, and builders become founders: creating startups, IP, partnerships, investment, and new technologies.

4 International

A visible hardware and technology community that attracts international students, researchers, founders, and companies ... and gives them a reason to stay.

Our Output

from atoms to impact

The right team, the right moment, the right place.

Why us

Three shipping communities, 1000+ people already engaged waiting for this to happen, partners already in - before a single euro of dedicated funding

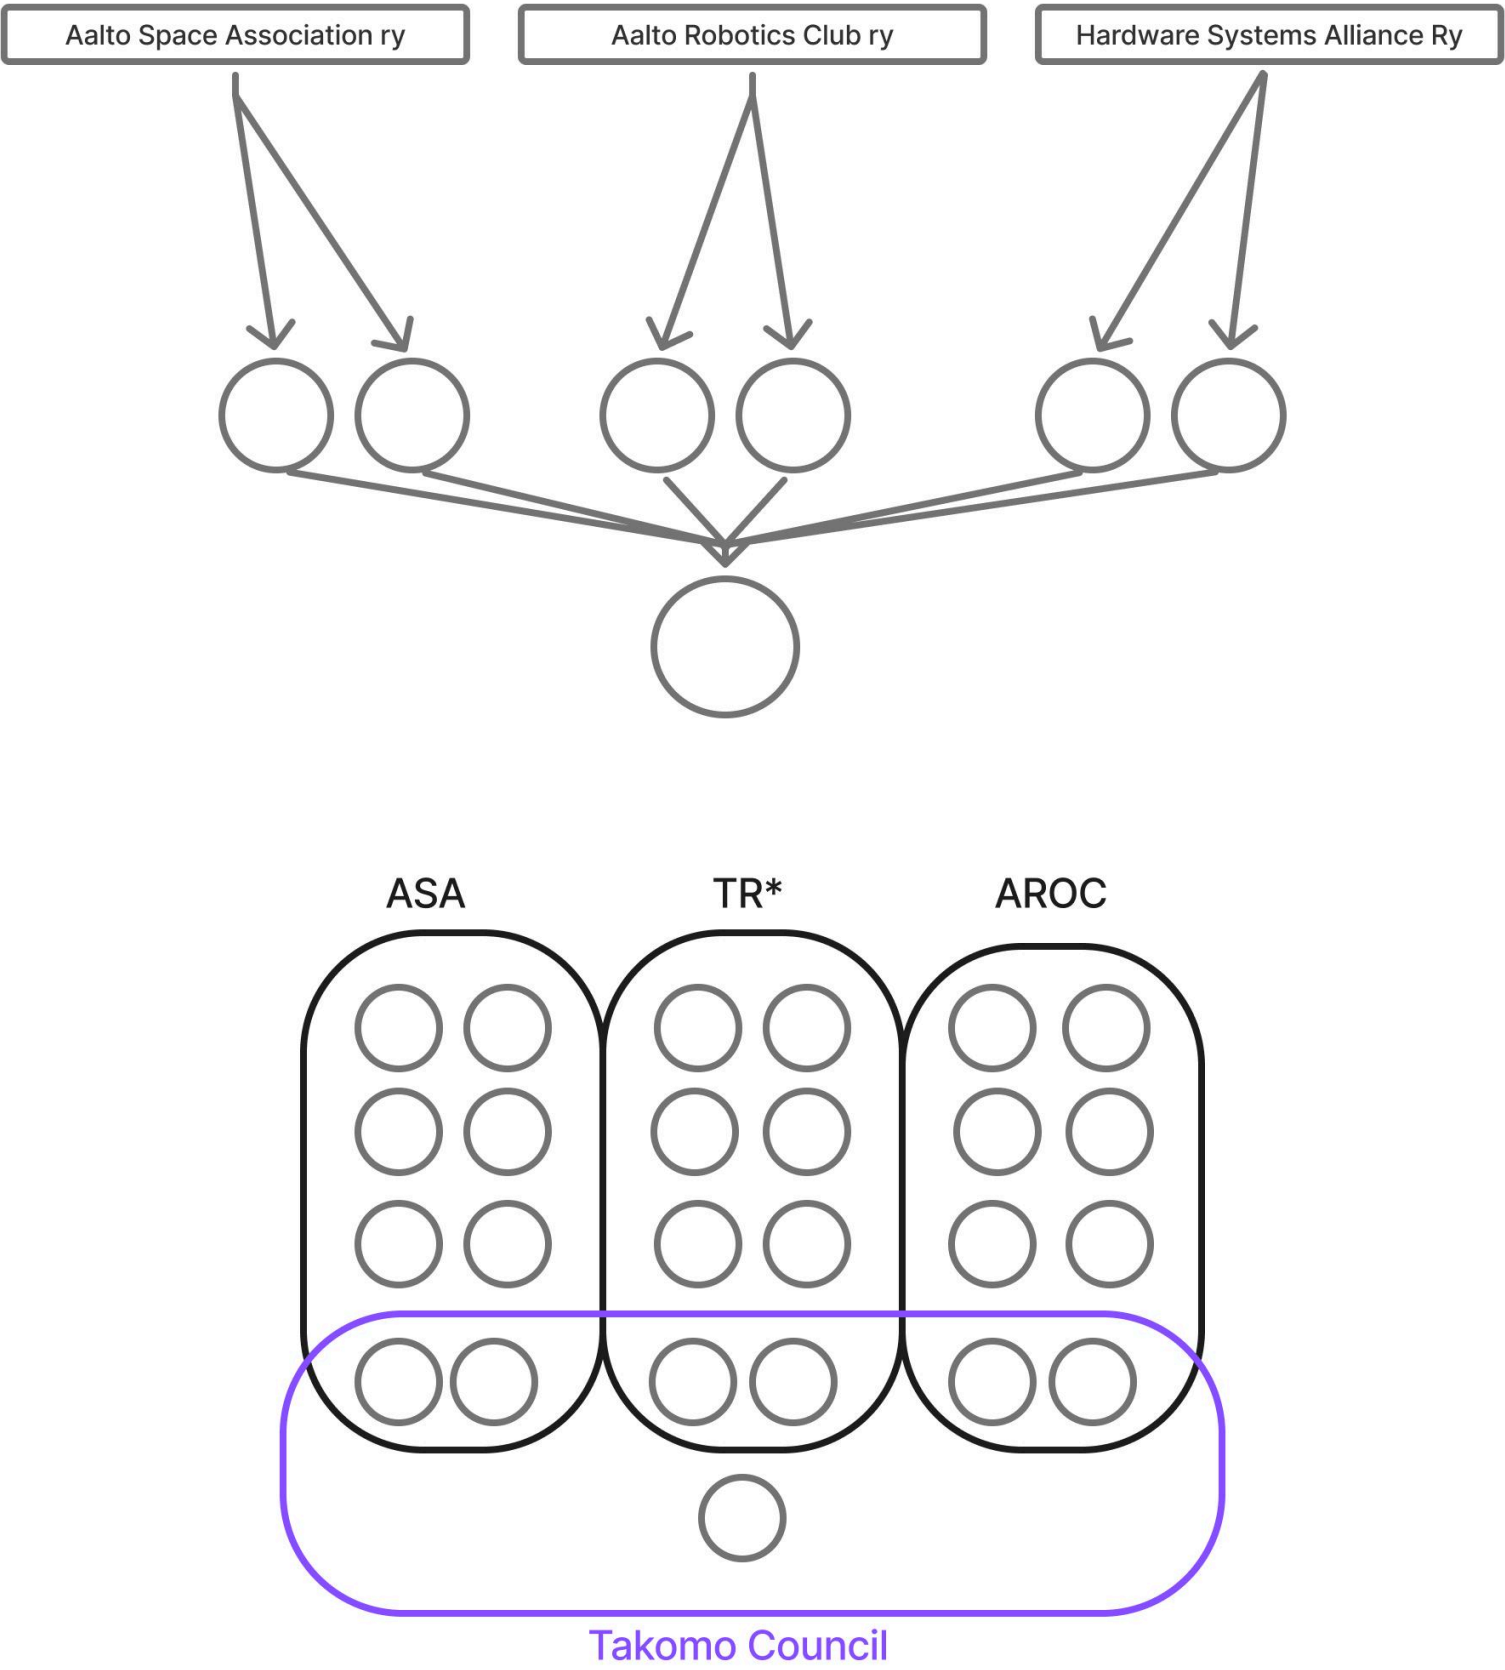

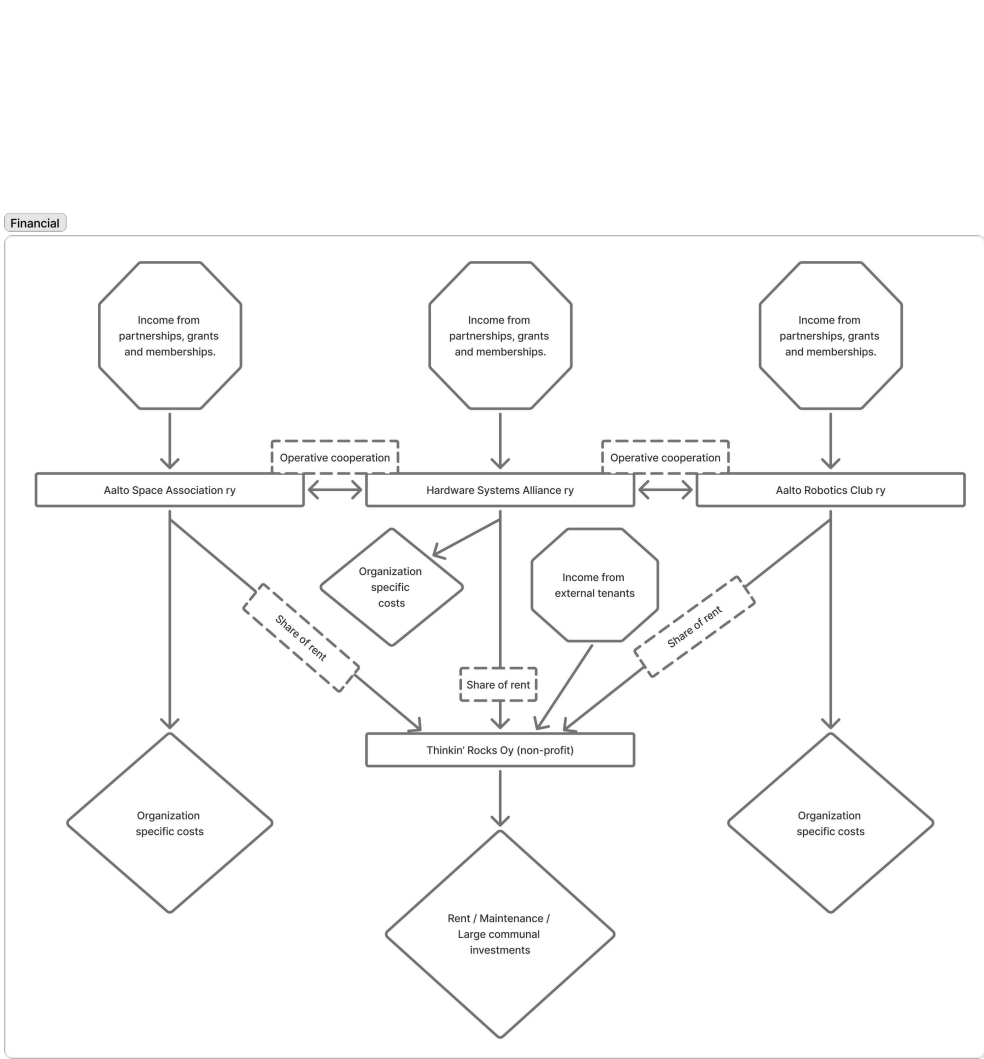

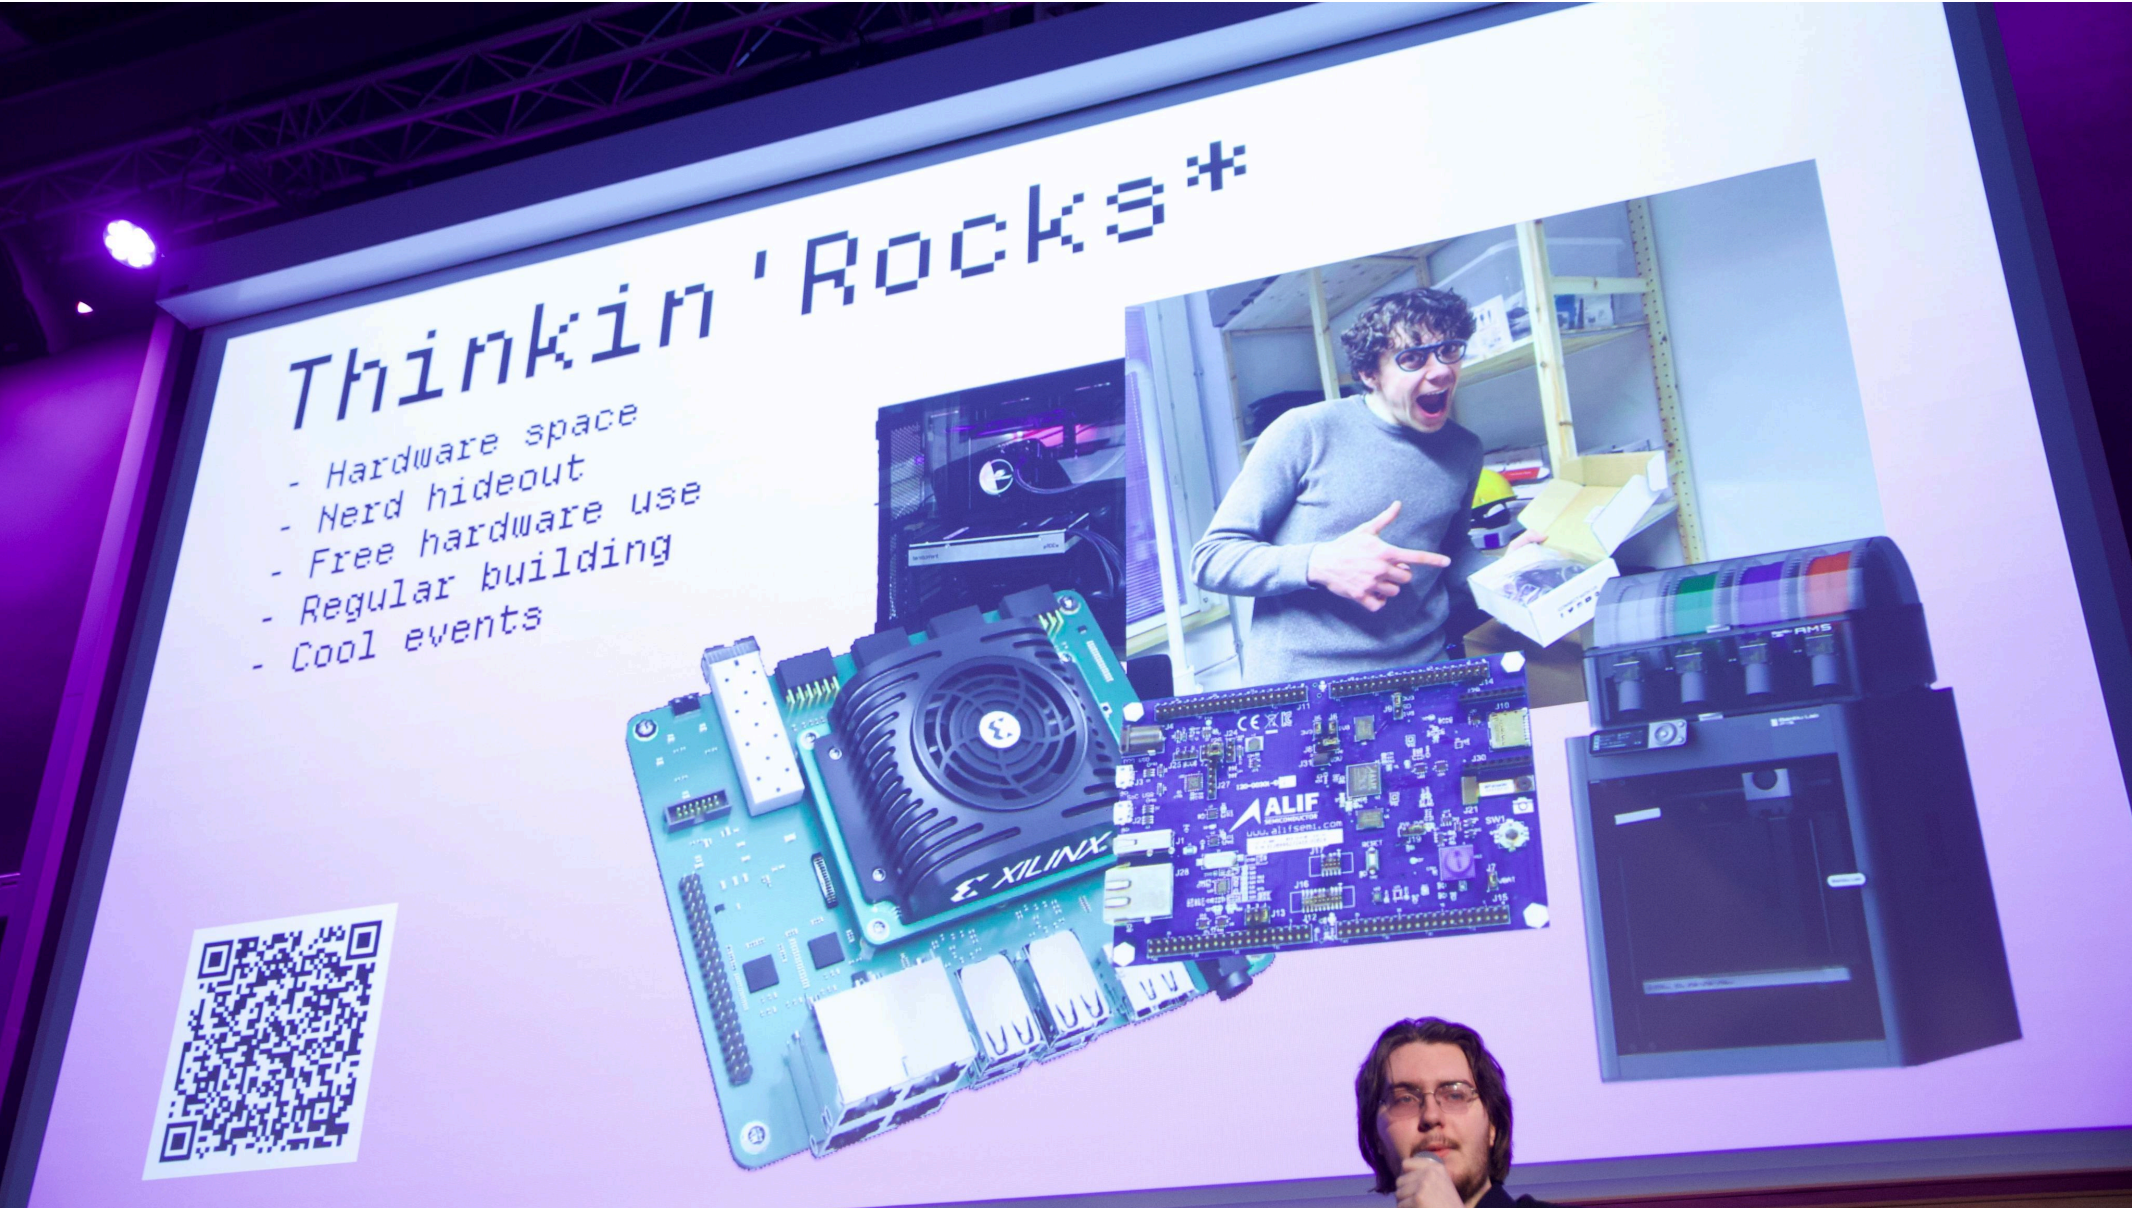

Why now

Physical AI is inflecting; software is commoditising; the builders exist but lack the space and resources.

Why here

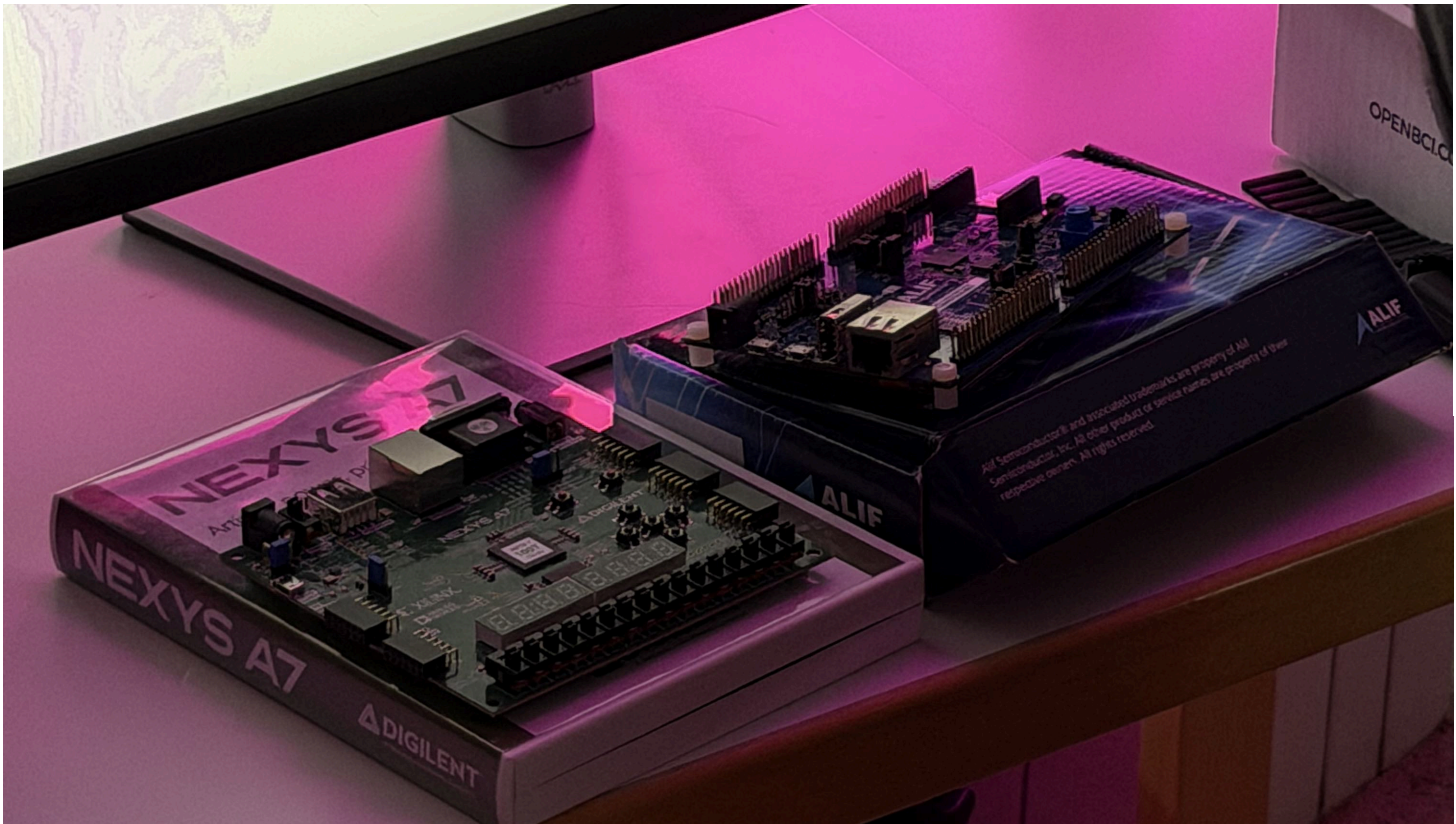

Aalto and our communities have the talent, the design DNA, and a proven record of student-led ventures going global.

Team & Structure

Structure

- HSA ry owns 100% Thinkin' Rocks Oy, which operates the TAKOMO space
- ASA and AROC are founding communities with their own governance and budgets.
- Legal and bookkeeping are kept separate across entities; TAKOMO holds no assets

We know what we are measuring against.

MIT

35+ makerspaces. Media Lab funds 25% of a \$66-80M budget from 34 corporate members. Fab labs began here.

ETH Zurich

Student Project House: 3,000+ students built their ideas since 2016; spinoffs like Yakai; pro-bono experts + fellowships

Newlab

400+ member startups raised \$4B VC, \$3B exits, \$17B+ - valuation, 264 days quicker to raising a series A - largely self-funded via corp/gov projects.

Dream Hall - TU Delft

13 student teams, 400+ students designing and building rockets, race cars, robots & other hardware. 25+ years of student engineering; dedicated workshops, equipment & technical support.

TAKOMO

The Nordic forge built to reach that tier - starting from running a community
